The present sequence represents a Monkey antibody light chain linked to a heavy chain. The antibody binds to a target structure displayed in and on the cell surface of human gastrointestinal peithelial tunuour cells and in a subpopulation of normal human gastrointestinal epithelial cells. The target structure especially comprises alphaébeta4 integrin. This is a tumour-associated antigen. The antibody, and its fragments, are useful for treating conditions based on anti-angiogenic mechanism in humans. They are useful for treating human metastatic and malignant disease, for in vitro, in vivo diagnosis and prognosis of human malignant disease, comprising tumour typing, tumour screening, tumour diagnosis and monitoring premallignant conditions. Quantitative in vivo diagnosis is carried out by determining the localization of antibody to

The human monoclonal antibody D7C2, of isotype IgM, recognises a 30-32 kD polypeptide on the membrane of rhesus positive red blood cells. The antibody agglutinates rhesus positive cells but not rhesus negative cells and is useful diagnostically and also for preventing haemolysis in newborn rhesus positive babies. Recombinant IgM-D7C2 can be produced by comprising a D7C2 expression cassette. The present sequence is that of a recombinant IgM-D7C2 lambda light chain fused downstream of a signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant anti-rhesus D monoclonal antibody - expressed by baculovirus-transformed insect cells and useful for preventing haemolysis in new-born
                                                                                                                                                                                                                                                    20. .238

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The human monoclonal antibody D7C2, of isotype IgM, recognises a 30-32 kD bytypetride on the membrane of rhesus positive red blood cells. The antibody agglutinates rhesus positive cells but not rhesus negative cells and is useful diagnostically and also for preventing haemolysis in newborn rhesus positive babies. Recombinant IgM-D7C2 can be produced by comprising a D7C2 expression cassette. The present sequence is that of the variable region of the IgM-D7C2 light chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Recombinant anti-rhemus D monoclonal antibody - expressed by baculovirus-transformed insect cells and useful for preventing haemolysis in new-born
                                                                                                                    Human monoclonal antibody; immunoglobulin isotype IgM; agglutination;
rhesus positive; rhesus negative; haemolysis; lambda light chain;
variable region; insect host cell; baculovirus; recombinant production.

This polypeptide sequence comprises the VL domain of human scrv antibody 10A6, which is specific for transforming growth factor (TGF) beta-1. It is encoded by a gene (AAT60384) isolated from a peripheral blood I ymphocyte library. The antigen-binding domains of human antibodies (see AAM1552240) to TGF beta-1 and/or beta-2 can be used to counter the dermal, ocular or keloid scarring, lung fibrosis, arterial injury, proliferative retinopathy, retinal detachment, adult respiratory distress syndrome, liver cirrhosis, post myocardial infarction, post-angioplasty castenosis, scleroderma, vascular disorders, cateract, glaucoma, or esp. neural scarring and glomerulonephitis, also (not claimed) osteoporosis), or (ii) immune and inflammatory diseases (e.g. rheumatoid arthritis, macrophage deficiency diseases or macrophage pathogen infection). Nucleic macrophage deficiency diseases or macrophage pathogen infection). Nucleic condinant antibedy VH and VL can be used for prodn. of recombinant antiben-binding domains. These are highly specific, have low dissociation constants (pref. less than 5 mM) and low IC508 for
antibody engineering; scFv; phage display; lung fibrosis; arterial injury; proliferative retinopathy; retinal detachment; adult respiratory distress syndrome; liver cirrhosis; post myocardial infarction; post-angioplasty restenosis; scleroderma; vascular dideases; cataract; glaucoma; scarring; glomerulonephritis; osteoporosis; immune disease; inflammarion; rheumatoid arthritis; macrophage deficiency disease; macrophage pathogen infection; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Agent contg. antigen-binding domain of human antibody to transforming growth factor beta 1 or 2 - and nucleic acid encoding it, used to neutralise effects of TGF, e.g. for control of fibrosis, immune and inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAlDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (CVID) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antitheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of EhyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease administered to treat diseases associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TMF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antitheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (CVID) and acquired immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)).                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes move antibodies that immunospecifically bind. Continuous the bind of the invention of the invention of the invention and differentiation. The antibodies of the invention have prostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BiyS. The antibodies bind to BiyS in blological samples and may be used in this way to diagnose disease associated with aberrant expression of BiyS. They may also be associated with aberrant expression of BiyS. They may also be associated to treat diseases associated with aberrant BiyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency (GVID) and acquired immunodeficiency syndrome (AIDS)). This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell cumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodilatory, antirheumatic and antiALDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases acciated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases. e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (ALDS)). ABB43990-ABB47228 represent the antibodies and fragments of the antibodies described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel antibodies that immunospecifically bind to be Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAnDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant syression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic; antiAIDS; vaccine; cancer; immune; autoimmune disorder; immunodeficiency; systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome.

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell cumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency and expression the antibodies and fragments of the antibodies described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Variable light chain, single chain antibody; scFv; human, HIb-1; glycoprotein Ib alpha; platelet; aggregation; antiaggregant; antithrombotic; thrombus; therapy; diagnostic; CDR1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The present sequence is that of complementarity determining region 1 (CDR1) of the light chain variable region (VL) of human single chain antibody (scrv) H1b-1 (see AAY95198), which is directed against platelet 34. COPATOR (SCRV) H1b-1 (see AAY95198), which is directed against platelet 34. Coprotein Ib (GPLb). The H1b series of scrv was isolated from a human cast synthetic VH and VL scrv library on the basis of their binding to platelet GPLb. Whether displayed as surface proteins on a phagemid or secreted as free scrv by Escherichia coli, the H1b scrv clones are capable of inhibiting von Willebrand factor-dependent aggregation of platelets. The scrv are composed of native human protein sequences and are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombi in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet chain, including CDR fragments, are also claimed fragments of the scrv VH or VL chain, including CDR fragments, are also claimed. Isolated nucleic acid molecule encoding anti-human platelet glycoprotein Ib alpha molecule useful for producing antibodies which inhibit platelet Claim 19; Fig 5; 89pp; English. 99WO-US025495 98US-0106275P WPI; 2000-365744/31. ы Г (MILL/) MILLER WO200026667-A1 30-OCT-1998; 29-OCT-1999; 11-MAY-2000 aggregation Miller JL;

Isolated nucleic acid molecule encoding anti-human platelet glycoprotein Ib alpha molecule useful for producing antibodies which inhibit platelet aggregation

Claim 19; Fig 7; 89pp; English.

The present sequence is that of complementarity determining region 1 (CDR1) of the light chain variable region (VL) of human single chain antibody (scrv) HID-3 (see AAY95219), which is directed against platelet glycoprotein ID (GPID). The HID series of scrv was isolated from a human synthetic VH and VL scrv library on the basis of their binding to platelet GPID. Whether displayed as surface proteins on a phagemid or secreted as free scrv by Escherichia coll, the HID scrv clones are capable of inhibiting von Willebrand factor-dependent aggregation of platelets. The scrv are composed of native human protein sequences and are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombo in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. CT methops of inhibiting aggregation of platelets, of binding human platelet CGPID alpha and of selecting a VH or VL region of an antibody that including CDR fragments, are also claimed

```
This invention describes a novel recombinant antibody (Ab) that binds native gp96. The product of the invention has cytostatic, antibacterial, virucide, fungicide and protozoacide activity. Complexes of gp96 with the peptides of the invention induce a immune response (cytotoxic T cells) specific for the associated peptides. Ab are used for purification or labeling of gp96, including intact complexes (C) with peptides (I), from small amounts of tumour or infected cells. (C) are useful: (i) in human or veterinary medicine for autologous immunization, for treating tumours or veterinary medicine for autologous immunization, for treating tumours or veterinary medicine for autologous immunization, for treating tumours or veterinary medicine for autologous immunization, for treating tumours (protozoa)); and (ii) for raising anti-idiotypic antibodies. Ab make possible isolation of very pure gp96 in native form, even from small tumour samples, in a one-step chromatographic process that does not contaminate the final product by bleeding from the column). This sequence represents the variable light chain complementarity determining region (CDRI); fragment of the antibody raised against human gp96 described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Cells from an unimmunised donor. Heavy chains from RNA from white blood cells from an unimmunised donor. Heavy chains from IgG and IgM antibodies were amplified separately. Four separate libraries were generated (IgG-K, IgG-lambda, IgM-Rand IgM-lambda). The purified scr fragments were ligated into the phagemid pHENI for expression on the surface of fd bacteriophage as gene III fusions. The clones were then subjected to affinity selection for binding to phOx:BSA by selection on tubes followed by analysis by ELISA. Of 96 clones analysed, 43 showed binding to both by analysis by ELISA. Of 96 clones analysed, 43 showed binding to both clones sequenced had the same sequence BSA binders. Thirteen of fourteen clones sequenced had the vL from a human VH demily gene (AAR22571) and the VL from a human VH demily gene and a chuman VL family gene one clone bound only to phox:BSA (oxazolone bunder). This sequence revealed a VH derived from a human VH family gene clone bound only to phox:BSA (oxazolone bunder). This sequence revealed a Line hamily gene (AAR2556) and VH family gene (AAR25569) and VH family gene (AAR25579).
                                                                                                                                                                                                                                                                                                                                                                               ò

AAT04638 encodes AAR80091 human derived light chain RT3 phage antibody. The DNA was used in the prepn. of catalytic antibody (CA) producing bacteriophage. The CAs can be used to activate/deactivate a biological function in an animal by enhancing the rate of cleavage, or formation of a specific bond within a mol. in vivo ö Length 103; 0; Indels Score 50; DB 2; Pred. Production of catalytic antibodies displayed on bacteriophages -comprises generating a gene library of antibody-derived domains inserting coding into a phage expression vector and isolating the catalytic 

The present invention describes an isolated Rh(D) binding protein, preferably a human antibody, (I) having an amino acid sequence comprising one of the sequences (S) given in AAG93158 to AAG93669. (I) has immunostimulant activity, and can be used as an immune system stimulant.

```
The invention relates to methods for producing catalytic antibodies displayed on a phage. The method comprises: (a) generating a gene library of antibody-derived domains; (b) inserting coding for the domains into a phage expression vector; and (c) isolating the catalytic antibodies. The phage expression vector incorporates a histidine peptide in tandem with a comprise, optionally immunising an animal with the antigen; generating an antigen; optionally immunising an animal with the antigen; generating a complex contingent of the and VL domains from the immunised animal; cloning the VH and VL domains into a phage expression vector to generate phage display antibodies; selecting phage display antibodies which bind specifically to the antigen; screening the selected phage display antibodies for catalytic activity to substrate; and isolating the catalytic antibodies; which can be used for in vivo activation of a prodrug.
                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                               Sequences AAW95484-489 represent genetic sequences of heavy and light chains of RT3 specific phage antibodies selected from a naive human phage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated protein, preferably a human anti-Rh(D) antibody for use in diagnostics requiring a human instead of an animal antibody and in

The present invention describes a method for detecting the presence of fibronectin isoform B (B-FN) in body fluid of an individual. The method involves passing the fluid over a solid support (SS) to which gelatin that binds FN is attached, such that if FN is present, it is retained on SS by binding gelatin, and determining the presence of B-FN on SS by determining the ability of a specific binding member for extra domain B (BD-B) of B-FN to be retained on SS. The method is useful for the cuantitative determination of B-FN in a body fluid taken or collected from an individual. Other methods from the present invention can be used: for quantitating the amount of an insoluble marker protein in a sample of tissue or tumour. An elevated level of B-FN in a body fluid sample of tissue or tumour. An elevated level of B-FN in a body fluid such as plasma, cerebral-spinal fluid or cystic fluid obtained from an individual is indicative of the presence of a tumour in the individual. The methods are useful in diagnostic and prognostic situations. The
         are used in diagnostics that require human antibodies instead of animal antibodies, such as determine the Rh phenotype of human red blood cells. AAH68615 to AAH68726 represent the nucleotide sequence which encode AAG631558 to AAG93669. AAG93670 to AAG93697 represent anti-Rh(D) heavy chain CDR3 amino acid sequences which are given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Detecting fibronectin isoform B in body fluid of an individual, by binding fibronectin to gelatin on solid support, and determining ability of specific binding member for Extra Domain B to be retained on support.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fibronectin isoform B; B-FN; extra domain B; ED-B; antibody; VL domain; angiogenesis; neoplasia; tumour; detection.
can be used in diagnostic and therapeutic medicine. The antibodies

The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the far mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies binding specifically to detectable label such as radiolabel, fluorescent or chemical group and detectable label such as radiolabel, fluorescent or chemical group and cased in methods of diagnosis in human subjects e.g. to determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for abdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The present sequence is that of the light chain variable region (VL) of human single chain antibody (scrv) HID-3 (see AAY95219), which is directed against platelet glycoprotein ID (GPID). The HID series of scrv was isolated from a human synthetic VH and VL scrv library by 3 rounds of phagemid selection against transfected CHO calls expressing the GPID caphagemid selection against transfected CHO calls expressing the GPID caphagemid selection against washed human platelets, and 2 final rounds the round of selection against washed human platelets, and 2 final rounds in which attempts were made to displace scrv from washed platelets by 1000 final with murine monoclonal antibody or minotope peptide (see AAY95229). Whether displayed as surface proteins on a phagemid or secreted as free scrv by Escherichia coli, the HID scrv clones are capable of inhibiting von Willebrand factor-dependent aggregation of platelets. The scrv are composed of mative human protein sequences and are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithromboit agents, useful for the prevention of platelet-dependent thromboit in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Settle diplay and of selecting a VH or VL region of an antibody that thibits platelet aggregation are claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

######

```
The present sequence is that of the light chain variable region (VL) of human single chain antibody (scFv) HID-1 (see AAY95198), which is directed against placelet glycoprotein Ib (GPID). The HID series of scFv was isolated from a human synthetic VH and VL scFv library by 3 rounds of phagemid selection against transfected CHO cells expressing the GPID cappage of alpha component of the GPID/IX/V complex on their surface, followed by a 4th round of selection against washed human platelets, and 2 final rounds in which attempts were made to displace scFv from washed platelets by CHO whether displayed as surface proteins on a phagemid or secreted as free scFv by Escherichia coli, the HID scFv clones are secreted as free scFv by Escherichia coli, the HID scFv clones are capable of inhibiting won Willebrand factor-dependent aggregation of platelets. The scFv are composed of native human protein sequences and are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombotin diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of plateletts, of binding human platelet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleic acid molecule encoding anti-human platelet glycoprotein Ib alpha molecule useful for producing antibodies which inhibit platelet

The present sequence represents an antibody variable light chain (VL) fragment. The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the DS VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The

```

The present sequence is that of the light chain variable region (VL) of human single chain antibody (scFv) HID-3 (see AAY95219), which is directed against platelet glycoprotein ID (GPID). The HID series of scFv was isolated from a human synthetic VH and VL scFv library by 3 rounds of phagemid selection against transfected CHO cells expressing the GPID phagemid selection against transfected CHO cells expressing the GPID at the round of the GPID/IX/V complex on their surface, followed by a 4th round of selection against washed human platelets, and 2 final rounds in which attempts were made to displace scFv from washed platelets by flooding with murine monoclonal antibody or mimctope peptide (see AAX95229). Whether displayed as surface proteins on a phagemid or secreted as free scFv by Escherichia coli, the HID scFv clones are capable of inhibiting von Willebrand factor-dependent aggregation of

```
are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombi in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet GPIb alpha and of selecting a VH or VL region of an antibody that inhibits platelet aggregation are claimed
The scFv are composed of native human protein sequences and
                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                               Sequence 50, Application US/09240274

Patent No. 6255455

GENERAL INFORMATION

TITLE OF INVENTION: Rh(D) -BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL

TITLE OF INVENTION: SOFTING METHOD FOR PRODUCTION THEREOF

FILE REFERENCE: 09596-4202

CURRENT APPLICATION NUMBER: US/09/240,274

CURRENT APPLICATION NUMBER: 60/081,380

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER FILING DATE: 1998-04-10

EARLIER FILING DATE: 1998-04-10

EARLIER FILING DATE: 1996-10-11

NUMBER OF SEQ ID NOS: 224

SEQ ID NO 50

LENGTH: 106
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      APPLICANT: Siegel, bonald L.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence Seq

Sequence 20, Application US/10300675
Publication No. US20030198638A1
GENERAL INFORMATION:
APPLICANT: Watkins, Jeffry D.
TITLE OF INVENTION: Tumor Specific Monoclonal Antibodies
FILE REFERENCE: P-IX 5519
CURRENT APPLICATION NUMBER: US/10/300,675
CURRENT FILING DATE: 2002-11-19
PRIOR APPLICATION NUMBER: US 09/989,901

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
